CONTENTS OF VOLUME 309

Number 1, February 15, 1994

RESEARCH REPORT

Insulin Increases Hepatic 3-Hydroxy-methylglutaryl Coenzyme A Reductase mRNA and Immunoreactive Protein Levels in Diabetic Rats — *Gene C. Ness, Linda Wiggins, and Zhihong Zhao* 193

BIOLOGICAL OXIDATIONS AND P450 REACTIONS

Aging and Proteolysis of Oxidized Proteins — *Sanjiv Agarwal and Rajindar S. Sohal* 24

Role of Residues 363 and 206 in Conversion of Cytochrome P450 2B1 from a Steroid 16-Hydroxylase to a 15α-Hydroxylase — *Zongshu Luo, You-ai He, and James R. Halpert* 52

A Possible Mechanism for Vascular Endothelial Cell Injury Elicited by Activated Leukocytes: A Significant Involvement of Adhesion Molecules, CD11/CD18, and ICAM-1
Hiroshi Fujita, Ikuo Morita, and Sei-itsu Murota 62

Serum Acetone and Liver Acetone Monooxygenase Activity in Pregnant Rats, Fetuses, and Neonates: Reversible Pretranslational Reduction of Cytochrome P450IIE1 (P450IIE1) during Pregnancy
Joseph P. Casazza, Dong Hwan Sohn, Kwang Sik Park, and Byoung J. Song 111

Expression of Modified Human Cytochrome P450 1A2 in *Escherichia coli*: Stabilization, Purification, Spectral Characterization, and Catalytic Activities of the Enzyme
Punam Sandhu, Zuyu Guo, Takahiko Baba, Martha V. Martin, Robert H. Tukey, and F. Peter Guengerich 168

BIOPHYSICAL CHEMISTRY AND X-RAY CRYSTALLOGRAPHY

Probing the Affinity of Polyanions for Acidic Fibroblast Growth Factor by Unfolding Kinetics
Henryk Mach and C. Russell Middaugh 36

Cleavage of Tubulin by Vanadate Ion
John J. Correia, Lewis D. Lipscomb, James C. Dabrowiak, Nancy Isern, and Jon Zubieta 94

ENZYME STRUCTURE AND MECHANISMS; CELLULAR REGULATION; PHOSPHORYLATION AND DEPHOSPHORYLATION

Absence of Glycogen Cycling in Cultured Rat Hepatocytes — *Niels Grunnet, Susanne Jensen, and John Dich* 18

The Gene for Biotin Synthase from *Saccharomyces cerevisiae*: Cloning, Sequencing, and Complementation of *Escherichia coli* Strains Lacking Biotin Synthase
Shuguang Zhang, Indrajit Sanyal, Gabriella H. Bulboaca, Alexander Rich, and Dennis H. Flint 29

Effects of Glucocorticosteroids and Insulin on Tyrosine Aminotransferase Activity in Isolated Chick Embryo Hepatocytes and in Intact Embryos *in Ovo* — *I. O. Onoagbe* 58

In Situ Behavior of the Pyrimidine Pathway Enzymes in *Saccharomyces cerevisiae*. 4. The Channeling of Carbamylphosphate to Aspartate Transcarbamylase and Its Partition in the Pyrimidine and Arginine Pathways
Bernadette Penverne, Mohamed Belkaïd, and Guy Hervé 85

Identification of a 100-kDa Phosphoprotein in Developing Murine Embryos as Elongation Factor 2
Thomas L. Brown, Wendy C. Fischer, Michael D. Collins, Barun K. De, and William J. Scott, Jr. 105

Activities of Enzymes Involved in Renal Cellular Glutathione Metabolism after Uninephrectomy in the Rat
Lawrence H. Lash and Rudolfs K. Zalups 129

Purification and Characterization of Fungal Nuclease Composed of Heterogeneous Subunits
Kazuo Ito, Yoshie Matsuura, and Noshi Minamiura 160

Molecular Entrapment of Small Molecules within the Interior of Horse Spleen Ferritin
B. Webb, J. Frame, Z. Zhao, M. L. Lee, and G. D. Watt 178

11 731HI XL 1731 9/94 31249-150

GENE EXPRESSION, TRANSCRIPTION, AND TRANSLATION

Developmental Regulation of Basal and Hormone-Inducible Phosphoenolpyruvate Carboxykinase Gene Expression in Chick Embryo Liver *in Vivo* *Jennifer McCaffrey and Joshua W. Hamilton* 10

GLYCOCONJUGATES AND OLIGOSACCHARIDES; PROTEOGLYCANS AND EXTRACELLULAR MATRICES

Regulation of Rat Glomerular Epithelial Cell Proteoglycans by High-Glucose Medium
B. S. Kasinath, Joel A. Block, Ashok K. Singh, William C. Terhune, Rolando Maldonado, Sridevi Davalath, Mary Jo Kallgren, and Linda Wanna 149

LIPIDS, LIPID MEDIATORS, AND GLYCOLIPIDS

Sequential Oxygenation of Linoleic Acid in the Fungus *Gaeumannomyces graminis*: Stereochemistry of Dioxygenase and Hydroperoxide Isomerase Reactions
Mats Hamberg, Lian-Ying Zhang, Irene D. Brodowsky, and Ernst H. Oliw 77

On the Molecular Origin of Charge Heterogeneity of Rat Liver Fatty Acid-Binding Protein (Z-protein)
Shoji Odani, Yoko Okazaki, Chieko Kato, Toshio Uchiumi, and Yoshiaki Takahashi 81

MEMBRANE PROTEINS AND TRANSPORT; INTRACELLULAR SIGNALS; CYTOKINES AND RECEPTORS

Characterization of a Phenobarbital-Inducible Ah Receptor-like Protein in the Sprague–Dawley Rat
Leann Benedetti, Lisa S. MacCormack, and Nigel J. Bunce 1

Evidence for the Intraluminal Positioning of *p*-Nitrophenol UDP-glucuronosyltransferase Activity in Rat Liver Microsomal Vesicles
Rosella Fulceri, Gábor Bánhegyi, Alessandra Gamberucci, Roberta Giunti, József Mandl, and Angelo Benedetti 43

Proline Transport in Rat Kidney Mitochondria
Anna Atlante, Salvatore Passarella, Pasqualina Pierro, and Ernesto Quagliariello 139

PLANT BIOCHEMISTRY AND MOLECULAR BIOLOGY

A Novel tRNA Precursor Cleaving Endoribonuclease from *Zea mays*
David K. Hayashi and Benjamin C. Stark 123

Biosynthesis of Monoterpenes: Partial Purification, Characterization, and Mechanism of Action of 1,8-Cineole Synthase *Rodney Croteau, William R. Alonso, Alfred E. Koepp, and Mark A. Johnson* 184

PROTEIN STRUCTURE AND FUNCTION; PROTEASES, PROTEIN TURNOVER, AND POST-TRANSLATIONAL PROCESSING

Structure of a Reptilian Plasma Thyroxine Binding Protein Indicates Homology to Vitamin D-Binding Protein
Paul Licht and Michael F. Moore 47

Amino Acid Sequence of β-Microseminoprotein from Porcine Seminal Plasma
Per Fernlund, LisaBritt Granberg, and Peter Roepstorff 70

The Effect of Substituted Laminin A Chain-Derived Peptides on the Conformation and Activation Kinetics of Plasminogen *M. Sharon Stack and Salvatore V. Pizzo* 117

Number 2, March 1994

RESEARCH REPORT

The Permeation of Pyridoxal 5′-Phosphate in Chicken Liver Peroxisomes
Haruhiko Sakuraba and Tomoo Noguchi 396

BIOLOGICAL OXIDATIONS AND P450 REACTIONS

Comparative Sugar Degradation by $(OH)^{\bullet}$ Produced by the Iron-Driven Fenton Reaction and Gamma Radiolysis
Elisabeth Franzini, Hassan Sellak, Jacques Hakim, and Catherine Pasquier 261

The Effect of Hemoglobin, Hematin, and Iron on Neutrophil Inactivation in Superoxide Generating Systems
Young-Myeong Kim, Isao Yamazaki, and Lawrence H. Piette 308

Determination of Superoxide and Ascorbyl Radicals in the Circulation of Animals under Oxidative Stress
Keiko Koyama, Kiyoshi Takatsuki, and Masayasu Inoue 323

Excess Membrane Cholesterol Is Not Responsible for Metabolic and Bioenergetic Changes in AS-30D Hepatoma Mitochondria
Dennis J. Dietzen and E. Jack Davis 341

Increased Production of Reactive Oxygen Species by Rat Liver Mitochondria after Chronic Ethanol Treatment
Ewa Kukielka, Elisa Dicker, and Arthur I. Cederbaum 377

BIOPHYSICAL CHEMISTRY AND X-RAY CRYSTALLOGRAPHY

Resonance Energy Transfer Determination of the Distance between the Four Cysteine-364 Residues in *Saccharomyces cerevisiae* Phosphoenolpyruvate Carboxykinase
Marysol Alvear, M. Victoria Encinas, Lorena Herrera, and Emilio Cardemil 231

Synaptic Plasma Membrane Structure and Polarity of Long-Sleep and Short-Sleep Mice
Friedhelm Schroeder, Scott M. Colles, George P. Kreishman, Clayton E. Heyliger, and W. Gibson Wood 369

ENZYME STRUCTURE AND MECHANISMS; CELLULAR REGULATION; PHOSPHORYLATION AND DEPHOSPHORYLATION

The pH-Dependent Behavior of Catalytic Activities of *Azospirillum brasilense* Glutamate Synthase and Iodoacetamide Modification of the Enzyme Provide Evidence for a Catalytic Cys–His Ion Pair
Maria A. Vanoni, Paola Accornero, Giovanna Carrera, and Bruno Curti 222

Stress-Induced Insolubilization of Certain Proteins in Ascites Tumor Cells
Alexander E. Kabakov and Vladimir L. Gabai 247

Importance of the Modulation of Glycolysis in the Control of Lactate Metabolism by Fatty Acids in Isolated Hepatocytes from Fed Rats
Christine Morand, Catherine Besson, Christian Demigne, and Christian Remesy 254

Chemical Modification of Human UDP-Glucuronosyltransferase UGT1*6 by Diethyl Pyrocarbonate: Possible Involvement of a Histidine Residue in the Catalytic Process
Eric Battaglia, Michael Pritchard, Mohamed Ouzzine, Sylvie Fournel-Gigleux, Anna Radominska, Gérard Siest, and Jacques Magdalou 266

The NAD Kinase: A Phosphoryltransferase Displaying an Oxido-reductase Activity—An Electrophoretic Study
Raymond Jalouzot, Marie-Anne Pou, Catherine Aubry, and Danielle Laval-Martin 281

Purification and Properties of Porcine Liver Ornithine Transcarbamylase
Jeanne B. Koger, Robert G. Howell, Mary Kelly, and Evan E. Jones 293

Steady-State Kinetics of Glutamine Cyclotransferase
Mikhail Yu. Gololobov, Inseok Song, Wenying Wang, and Robert C. Bateman, Jr. 300

3,5,8-Trihydroxy-4-quinolone, a Novel Natural Inhibitor of the Reverse Transcriptases of Human Immunodeficiency Viruses Type 1 and Type 2
Shoshana Loya, Amira Rudi, Ruth Tal, Yoel Kashman, Yossi Loya, and Amnon Hizi 315

Casein Kinase II of *Saccharomyces cerevisiae* Contains Two Distinct Regulatory Subunits, β and β'
Ashok P. Bidwai, J. Craig Reed, and Claiborne V. C. Glover 348

GENE EXPRESSION, TRANSCRIPTION, AND TRANSLATION

Extracellular Glutathione Peroxidase mRNA and Protein in Human Cell Lines
Nelly Avissar, Elizabeth A. Kerl, Susan S. Baker, and Harvey J. Cohen 239

The Effects of *fur* on the Transcriptional and Post-transcriptional Regulation of MnSOD Gene (*sodA*) in *Escherichia coli*
Laura W. Schrum and Hosni M. Hassan 288

LIPIDS, LIPID MEDIATORS, AND GLYCOLIPIDS

Reduction of HDL- and LDL-Associated Cholesterylester and Phospholipid Hydroperoxides by Phospholipid Hydroperoxide Glutathione Peroxidase and Ebselen (PZ 51)
Wolfgang Sattler, Matilde Maiorino, and Roland Stocker 214

Identification of the Lipid Moiety and Further Characterization of the Novel Lipophosphoglycan-like Glycoconjugates of *Trichomonas vaginalis* and *Trichomonas foetus*
Bibhuti N. Singh, David H. Beach, Donald G. Lindmark, and Catherine E. Costello 273

MEMBRANE PROTEINS AND TRANSPORT; INTRACELLULAR SIGNALS; CYTOKINES AND RECEPTORS

4′-Amino-benzamido-taurocholic Acid Selectively Solubilizes Glycosyl-phosphatidylinositol-Anchored Membrane Proteins and Improves Lipolytic Cleavage of Their Membrane Anchors by Specific Phospholipases
Günter Müller, Andrea Korndörfer, Karin Saar, Barbara Karbe-Thönges, Hugo Fasold, and Stefan Müllner 329

Tryptophan-Free *Escherichia coli* F_1-ATPase
Susan Wilke-Mounts, Joachim Weber, Ernst Grell, and Alan E. Senior 363

PROTEIN STRUCTURE AND FUNCTION; PROTEASES, PROTEIN TURNOVER, AND POST-TRANSLATIONAL PROCESSING

The Nonactivated Estrogen Receptor (naER) of the Goat Uterus Is a Tyrosine Kinase
P. Anuradha, Shah Mohammed Khan, N. Karthikeyan, and Raghava Varman Thampan 195

A DNA-Binding (R-I) and a Non-DNA-Binding (R-II) Estrogen Receptor in the Goat Uterine Nucleus: Purification and Characterization
N. Karthikeyan and Raghava Varman Thampan 205

Thioredoxin-Linked Reductive Inactivation of Venom Neurotoxins
Rosa M. Lozano, Boihon C. Yee, and Bob B. Buchanan 356

Incorporation of [^{3}H]Ethanolamine into a Single Cytosolic Protein in a Cell Free System: Ethanolaminylation of EF-1α *in Vitro*
Sidney W. Whiteheart and Gerald W. Hart 387

Isolation of Nonlabile Human Ceruloplasmin by Chromatographic Removal of a Plasma Metalloproteinase
Eduardo Ehrenwald and Paul L. Fox 392

AUTHOR INDEX FOR VOLUME 309 399

NOTICE

The Subject Index for Volume 309 will appear in the December 1994 issue as part of a cumulative index for the year 1994.

Archives of
BIOCHEMISTRY AND BIOPHYSICS

INSTRUCTIONS TO AUTHORS[1]

Archives of BIOCHEMISTRY AND BIOPHYSICS is an international journal dedicated to the dissemination of fundamental knowledge in all areas of biochemistry and biophysics. **Research Reports** and **regular manuscripts** that contain new and significant information of general interest to workers in these fields are welcome. Sufficient detail must be included to enable others to repeat the work.

Research Reports provide a mechanism for rapid publication of short but complete manuscripts on outstanding and novel research findings. They should consist of 1000 or fewer words of text and a total of six or fewer figures and tables. The first paragraph should describe, without abbreviations, the background, rationale, principal findings, and conclusions of the study. Experimental methods should be reported in the table or figure legends, not in the text. Acknowledgments may be included in a footnote to the title. Omit the abstract and text subheadings, and keep literature citations to a reasonable minimum. The scientific quality of these reports should be of the highest caliber to facilitate rapid review. Authors should identify the manuscript as a Research Report and submit it directly to the Editorial Office of the journal (see below).

Accelerated status may also be given to those manuscripts that are reviewed as outstanding and that require little or no revision. At submission, authors may request accelerated publication of their manuscript. To expedite publication of such articles, authors will not receive proofs.

Manuscripts should be written in clear, concise, and grammatical English and should be submitted in quadruplicate (one original and three photocopies), including four sets of original figures or good quality glossy prints, to:

Archives of BIOCHEMISTRY AND BIOPHYSICS
Editorial Office, 525 B Street, Suite 1900
San Diego, California 92101-4495

Failure to receive the required number of copies of the manuscript may delay review. All copies of halftone artwork *must* be glossy prints or originals; photocopies of halftones do not show sufficient detail to be used for the review process. *In the case of rejected manuscripts only one copy of the manuscript will be returned to the author.*

For nucleotide sequence data authors are encouraged to submit original nucleotide or amino acid sequence data to a databank such as GenBank or EMBL. A footnote that includes the accession number should be included on the title page. It is preferable that the sequence data be deposited either prior to submission or by the time of acceptance of the manuscript. However, a footnote can be added at the proof stage if the material is deposited after acceptance. For further information please contact the Editorial Office or GenBank or EMBL directly.

Policy regarding publication of experiments on unanesthetized animals conforms with the standards for use of laboratory animals established by the Institute of Laboratory Animal Resources, U.S. National Academy of Sciences. Experiments in which curariform agents are used must be justified and details of the steps taken to reduce or avoid distress to the animal must be provided, particularly with regard to electrical stimulation.

Original papers only will be considered. ***Manuscripts are accepted for review with the understanding that the same work has not been published, that it is not under consideration for publication elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out. It is the responsibility of the corresponding author to obtain the agreement of all the coauthors of the manuscript prior to its submission to the journal.*** Abstracts of oral or poster presentations are not considered to constitute previous publication. Presentation of material in preliminary communications normally will not preclude publication of a full paper in **Archives**, provided that the full paper contains additional information that justifies its publication and does not repeat the presentation of the same data that supported the preliminary communication. The manuscript should be accompanied by copies of all preliminary communications and of all relevant manuscripts that are in press or under editorial consideration by another journal. Authors must verify the wording of any cited personal communication with the persons who supplied the information and obtain approval for the use of their names in connection with the quoted information or for the citation of unpublished work; written evidence of such approval should accompany the manuscript. All material published in **Archives** represents the opinions of the authors and should not be construed to reflect the opinions of the Editors or the Publisher.

Authors should suggest competent reviewers in their field and may also suggest individuals whom they wish to have excluded from the review process. The corresponding author will receive a decision letter from the Executive Editor. Revised manuscripts and correspondence concerning such manuscripts should be sent to the Executive Editor at the address indicated on the decision letter. Revised manuscripts should be accompanied by a copy of the unrevised version.

Many acceptable papers require minor revision or condensation. It is in the mutual interest of both the authors and the journal that amended manuscripts be returned promptly. A revised paper will retain its original date of receipt only if it is received by the Executive Editor within 2 months of the date of return to the author.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

[1] An extended Instructions to Authors is published in the January issue of **Archives of BIOCHEMISTRY AND BIOPHYSICS**. Reprints are available from the Editorial Office upon request. Authors should consult the extended Instructions for details on nomenclature, IUPAC–IUBMB rules and recommendations, and accepted abbreviations.

Form of manuscript. Manuscripts should be typewritten and double-spaced throughout on one side of $8\frac{1}{2} \times 11$-in. white paper, with 1-in. margins on all sides. All pages should be numbered consecutively.

Subject Areas. Authors should specify on page 1 of the manuscript the Subject Area of the article submitted:

Biological Oxidations and P450 Reactions
Glycoconjugates and Oligosaccharides; Proteoglycans and Extracellular Matrices
Lipids, Lipid Mediators, and Glycolipids
Biophysical Chemistry and X-Ray Crystallography
Membrane Proteins and Transport; Intracellular Signals; Cytokines and Receptors
Enzyme Structure and Mechanisms; Cellular Regulation; Phosphorylation and Dephosphorylation
Plant Biochemistry and Molecular Biology
Protein Structure and Function; Proteases, Protein Turnover, and Post-translational Processing
Gene Expression, Transcription, and Translation

Page 1 should contain the article title, author(s), affiliation(s), a short running title (abbreviated form of title) of less than 65 characters including letters and spaces, the appropriate subject category for listing in the Table of Contents, suggestions for index list entries, and the name, complete mailing address, and telephone and fax numbers of the person to whom correspondence should be sent.

Page 2 should contain a short abstract of 50–250 words.

Editorial style should conform to the *Handbook for Authors* (American Chemical Society).

Footnotes to the text should be identified by superscript Arabic numerals and should be typed double-spaced on a separate sheet: footnotes to tables should be identified by superscript lowercase italic letters (^{a,b}, etc.) and placed at the bottom of the table.

Tables should be numbered with Roman numerals and cited consecutively in the text. Each table should be titled and typed double-spaced on a separate sheet. Units must be clearly indicated for each of the entries in the table.

Authors can submit complex tables and mathematical material as camera-ready copy. In this way, they are spared multiple, tedious proofreadings and the chance of error is reduced. Tables submitted as camera-ready copy should be typed single-spaced whenever possible and preferably submitted as 5×7-in. glossy prints.

Figures should be cited consecutively in the text by Arabic numerals. Legends should be typed double-spaced on a separate sheet. All figures and illustrations are to be submitted in such form as to permit photographic reproduction without retouching or redrawing. They should be planned to fit the proportion of the printed page ($7\frac{1}{8} \times 9$ in.; column width, $3\frac{1}{2}$ in.) and submitted no larger than $8\frac{1}{2} \times 11$ in. Lettering on drawings should be of professional quality or generated by *high-resolution* computer graphics and should be large enough (10–12 points) to take a reduction of 50–60%. Drawings should be made with black India ink on tracing linen, smooth-surface white paper, or Bristol board. Alternatively, *high-quality* computer graphics may be acceptable. Graph paper, if used, should be ruled in blue. Glossy prints of figures properly prepared are acceptable. Illustrations in color can be accepted only if the authors defray the cost.

Cover photographs. Suggestions for *cover photographs* are welcome. Submit them as slides with $8\frac{1}{2} \times 11$-in. color or black-and-white prints to accompany specific articles. A short (one-line) legend should accompany each photograph.

References should be cited in the text by an Arabic numeral in parentheses and listed at the end of the paper in numerical order typed double-spaced on a separate sheet. Abbreviations of journal titles should conform to those of the most recent edition of *Chemical Abstracts Service Source Index.* Please note the following examples.

1. Terry, M. J., Wahleithner, J. A., and Lagarias, J. C. (1993) *Arch. Biochem. Biophys.* **306,** 1–15.
2. Bolander, F. F. (1989) Molecular Endocrinology, Academic Press, San Diego.
3. Compton, T. (1990) *in* PCR Protocols: A Guide to Methods and Applications (Innis, M. A., Galfand, D. H., Sninsky, J. J., and White, T. J., Eds.), pp. 39–45, Academic Press, San Diego.

Miniprint supplements are an effective way of presenting supportive data. They are printed from plates made by photographic reduction from typed pages provided by the author. Types of data that have been published as miniprint supplements include analyses relevant to studies of amino acid or polynucleotide sequences, details of chemical syntheses, preparation of enzymes, extended statistical or mathematical discussions, and X-ray diffraction data. The miniprint supplement is published in the journal, immediately following the parent paper, and is included in the reprints. Since the miniprint supplement is produced from camera-ready copy supplied by the authors with no redaction or editorial changes it is important that the copy be letter perfect and conform to the style of the journal. *Authors will not be permitted to make changes to the miniprint supplement at the proof stage. Any changes necessary in the proof must be made as a typeset "Note added in proof."*

Proofs will be sent to the author, with a reprint order form. Authors will be charged for extensive alterations.

Reprints. Fifty reprints of each article will be provided free of charge. Additional reprints may be purchased.

Personal computer disks. Manuscripts may be submitted to **Archives of BIOCHEMISTRY AND BIOPHYSICS** on personal computer disks after the manuscript has been accepted and after all revisions have been incorporated onto the disk. Label the disk with the type of computer used, the type of software and the version number, and the disk format. All tabular material will be typeset conventionally. Art must be prepared as camera-ready copy; see the section on Figures earlier in these Instructions to Authors.

A hard copy printout of the manuscript that exactly matches the disk file must be supplied. Academic Press will not accept disks without accompanying printouts of all files on the disk. File names must clearly indicate the content of each file. The manuscript will be edited according to the style of the journal, and the proofs must be read carefully by the author. Disks that are not translatable or economical to process will not be used. The publisher reserves the right not to use the disk.

For further information on preparing the disk for typesetting conversion, please contact the publisher (Editorial Supervisor, Journal Division, Academic Press, 525 B Street, Suite 1900, San Diego, California 92101-4495; telephone: (619) 699-6415; fax: (619) 699-6800).

Current Research from Academic Press Journals

Developmental Biology

Editor-in-Chief: **Peter J. Bryant**
Developmental Biology Center, University of California, Irvine

Developmental Biology publishes original analytical research on mechanisms of development, differentiation, growth, regeneration, and tissue repair in plants and animals at the molecular, cellular, and genetic levels. The editorial board has been expanded, and provides expert coverage of all fields in developmental biology.

Research Areas Include

- Molecular genetics of development
- Control of gene expression
- Cell interactions and cell–matrix interactions
- Mechanisms of differentiation
- Growth factors and oncogenes
- Regulation of stem cell populations
- Gametogenesis and fertilization
- Developmental endocrinology
- Plant development

PUBLISHED UNDER THE AUSPICES OF
THE SOCIETY FOR DEVELOPMENTAL BIOLOGY

Volumes 161–166 (1994), 12 issues
(including semiannual subject and organism indexes)
ISSN 0012-1606
In the U.S.A. and Canada: $1539.00
All other countries: $1808.00

For information on privileged personal rates and sample copies, please write or telephone:

Experimental Cell Research

Research in All Areas of Cell Biology

Editor-in-Chief
N. R. Ringertz
Karolinska Institutet, Stockholm, Sweden
Associate Editor for North America
R. Baserga
Jefferson Cancer Institute, Philadelphia, Pennsylvania

Experimental Cell Research promotes the understanding of cell biology by publishing experimental studies on the general organization and activity of cells. The scope of the journal includes all aspects of cell biology, from the molecular level to the level of cell interaction and differentiation.

Volumes 210–215 (1994), 12 issues
ISSN 0014-4827
Institutional rate: $1380.00
Personal rate: $138.00

Research Areas Include

- Biosynthesis with reference to cell growth
- Cell adhesion, cell–cell recognition, and cell–cell interaction
- Cell cycles
- Cell transformation *in vitro* and the transformed phenotype
- Energetic aspects of cell structure and function
- Functional role of subcellular particles
- Interactions among cells in tissues or in culture
- Mechanisms of meiosis and mitosis
- Modulations in cultured cells
- Molecular biology of the cell surface
- Motility
- Physical and chemical aspects of cellular and intercellular structure
- Protein sorting between cytoplasmic and nuclear compartments
- Regulation of cell growth and differentiation
- Signal transduction from the cytoplasm to the nucleus
- Supramolecular organization of chromosomes in the interphase nucleus

Sample copies and privileged personal rates are available upon request. For more information, please write or call:
